<a href="#">Book Appt.</a>	**/**/**	00:00:00	Location	<a href="#">Click here</a>

### Explanation:

This design is a simple table based design which allows the user to select an appointment from the table. At the top right, they can also choose to see available appointments for tomorrow or a custom date. If they click on the custom date a popover will display and they can select the date. The user can book the appointment by clicking on Book Appt. which will take them to a confirmation page.

## Explanation:

This design uses a calendar based system where the user selects the date and a popover pops up where the user can see the available times and book them. Several improvements can be made to this design. The number of available times should be displayed on each calendar day. The location of the appointment should also be displayed in the popover.
